Did we get an NRC report on this?

Subject: Port Arthur RV Resort Oil Spill

On 09/19/17, TCEQ received a report of a waterline break with a sheen on the water at the Port Arthur RV Resort that started on 08/31/17. On 09/20/17, TCEQ drinking water responders arrived on scene and determined the release was not from the city water supply. Texas Railroad Commission and EPA responded to the scene to find that the release flows into a retention pond and potentially to Taylor's Bayou. RRC identified two pipelines that run under the property with no identified RPs; representatives from Motiva Refinery have responded to conduct air monitoring and assess. USCG contractors are en route to place boom and sorbent pads until a better assessment and response can be conducted Thursday morning.
